★ The Semco Promise ★

Semco Stone owns and operates our own quarries. We pride ourselves in providing a natural and quality product. Our diverse building stone collection has some of the most unique products you will find. The beauty of our products is they are made from natural stone, therefore variations should and can be expected. Even though colors in this brochure are as close to the actual stone as possible, photographic and printing techniques – and even actual viewing conditions – can alter perception of color.

Selections should be made from actual samples whenever possible, but even samples can vary from the delivered product simply because the beauty of natural stone is that each piece is unique. Semco Stone does the best we can to maintain consistent colors and textures. Communication is key with masons, contractors and your sales representative so that Semco can do our best to provide exactly what you need to complete your dream project.

As the largest distributor of natural stone products in the Midwest, at Semco Stone, we have earned our reputation through consistent products, advancements in technology, and quality and service that exceed industry standards, laying a solid groundwork for your success. We operate to ensure lasting satisfaction and something our customers can enjoy for years to come.

"People don't buy what you do; they buy why you do it. And what you do simply proves what you believe."

Semco Building Stone and Landscape Stone are natural stone products. Semco uses state-of-the-art technology to extract the stone in its natural state as safely as possible. However, products may contain cracks, pits, or other imperfections as a result of the quarrying process. The beauty of natural stone products resides in its unique characteristics; as a result, color, texture, size and bed-face variations will occur and may vary from samples provided to the customer and from shipment to shipment. Photographs, print material and items viewed on the Internet may be, in some measure, different from the stone you actually receive. All products are provided to you "AS IS" without warranty of any kind.

Return and Refund Policy

- Original receipt is required for all returned material.
- Material must be returned within 30 days of purchase date.
- Refunds will be issued in the form of a credit on account or via check
- All material is subject to a 20% restocking fee.
- Semco standard freight rates apply for any amount of returned material we pick up from jobsite
- All material, for return, picked up at a jobsite must be machine accessible, stacked according to return guidelines, and wrapped for safe hauling.
- Semco does not accept returns on Thin Veneer, except for full, unopened pallets, which are subject to a 20% restocking fee.
- Landscaping stone returns are accepted in full pallet quantity, and in original packaging only. Sorted and stacked material will not be accepted.
- Concrete products are only returnable in full pallets, sections, or layers, & must be in original packaging. Sorted and stacked material will not be accepted.

Glossary

Stone Cuts

- Full Veneer - Natural building stone with an average depth of 4".
- ThinCut™ Veneer - Natural building stone that is mechanically sawn to a depth of approximately 1" thick and is about 1/4 of the weight of full veneer.
- Random Height - Generally, stone with heights created by the random natural horizontal layering in the quarry known as bed-face. The stone is snapped by a hydraulic splitter to an approx. 3" - 5" depth. Random Height stone can also be created by snapping the stone to specific heights with a hydraulic splitter leaving a rough texture on all sides of the stone.
- Tumbled Random Height - Generally, stone with heights created by the random natural horizontal layering in the quarry known as bed-face. The stone is snapped by a hydraulic splitter to an approx. 3" - 5" depth. Tumbled Random Height stone can also be created by snapping the stone to specific heights with a hydraulic splitter leaving a rough texture on all sides of the stone. Tumbled Random Height stone is then mechanically tumbled to break off the sharp edges and create a smoother appearance.
- Dimensional - Created by sawing the stone to specific heights, typically 2 1/4", 5" & 7 3/4". 10 1/2" is available in most stones at an additional charge, this size is considered a jumper. The stone will fit together in a dimensional pattern.

Stone Finishes

- Antique Brush Finish - Also known as Leather-look finish. In stone, a smoothed textured surface, just short of polished, imparted by a mechanical rubbing process.
- Bullnose - A convex, semicircular molding used on edges of such masonry units as stair treads, window sills, caps & coping. Can be 1/2 or full bullnose, meaning both top & bottom edges are finished.
- Bushhammer Finish - A stone surface used decoratively or to provide a roughened traction surface.
- Honed Finish - In stone, a very smooth surface, just short of polished, imparted by a mechanical rubbing process.
- Natural Finish - In stone, the natural texture of the material, untouched by mechanical processes.
- Ogee Edge - A stone profile with a reverse curved edge: concave above, convex below.
- Polished Finish - The finest & smoothest finish available in stone characterized by a gloss or reflective property. Generally only possible on hard, dense materials.
- Rock-face - Also known as pitched stone, rough-faced stone that has had each edge of the exposed face pitched or hand chiseled. It is cut at a very low bevel, nearly in the plane of the face, in a straight line to form a defined ridge at each mortar joint.
- Sawed Finish - Also called sawed-face. Any stone surface left by a sawing process.
- Thermal Finish - In stone, a finish created by mechanically heating the surface of a stone to create a unique texture.

GLOSSARY

Stone Faces

- Bed-face - The natural horizontal layers found in rock formations. Can produce a variety of colors depending on the mineral deposits within the formation.
- Face - 1) The exposed surface of a wall or masonry unit.
